Class Description:

Technology and IP Law provides students with key legal and ethical principles that technology professionals employ as they innovate and carry out their professional responsibilities. Students will have opportunities to analyze real, cutting-edge issues from the bottom up, the way a practicing technologist would experience them. Major topics will include intellectual property ground-work and implementation, legal and ethical repercussions for product design and improvement, privacy considerations, and considerations within the definitions of employment. Students will also engage in in-depth classroom discussions exploring technologically innovative situations and related decision making from various viewpoints.
